MOSS, January 2009

New rules for wood pallets and packaging material for shipments to Norway.

Dear customer/agent

From 1st of January all wooden packaging must be marked according to FAOs international standard ISPM 15. To get this marking the wood must have undergone a warming treatment of minimum 56 degrees. The marking should be a ISO country code, a code from the producer and a code for the treatment of the wood.

Above; A correct marked wooden pallet.

The purpose of these new rules is to prevent introduction of new creatures that can damage the Norwegian woods.

The Norwegian Food- and nutrition Supervision will supervise the new rules closely, and any non approved wooden material will be either returned to its original
